Outline

- Overview of GNOS sounder

- Assessment of GNOS data quality

    - GPS RO data

    - BDS RO data

- Assimilation of GNOS data

- Summary and plan

FY-3 Satellite and GNOS Sounder

- **FengYun satellite:** Chinese meteorological satellite, **Feng** (wind) and **Yun** (cloud)，the FY-3 series is polar orbit satellite.

- **GNOS:** **G**lobal **N**avigation satellite system **O**ccultation **S**ounder, a multi-GNSS receiver, tracking for GPS and Chinese BDS signal.

Timeline of FengYun 3 series satellites

Characters of GNOS Payload

parameters	GNOS I	GNOS II
Satellite	FY3C, FY3D	FY3E, ……
Constellation	• GPS L1 C/A, L2 P • Second generation BDS (5 GEO + 5 IGSO + 4 MEO); • Open loop for GPS, closed loop for BDS in FY3C and open loop in FY3D	• GPS/BDS/ GALILEO/ GLONASS(option) • Third generation BDS (5 GEO + 3 IGSO + 27 MEO); • Open loop both for GPS and BDS
Channel number	Positioning: GPS 8 Occultation: GPS 6(FY3C)->8(FY3D) Positioning: BDS 4(FY3C)->6(FY3D) Occulation: BDS 4(FY3C)->6(FY3D)	Positioning: 8 (GPS & BDS) Occultation: GPS 8 BDS 8 strengthen the gain
Receiver	RO	Combination of RO and GNSS-R

Data Volume
- FY3C GPS RO profiles have been processed by QC, others have no QC.
- Less BDS RO profiles because there are less BDS RO channels and BDS-2 is a regional GNSS.

Problem in Early FY-3C GPS RO Data
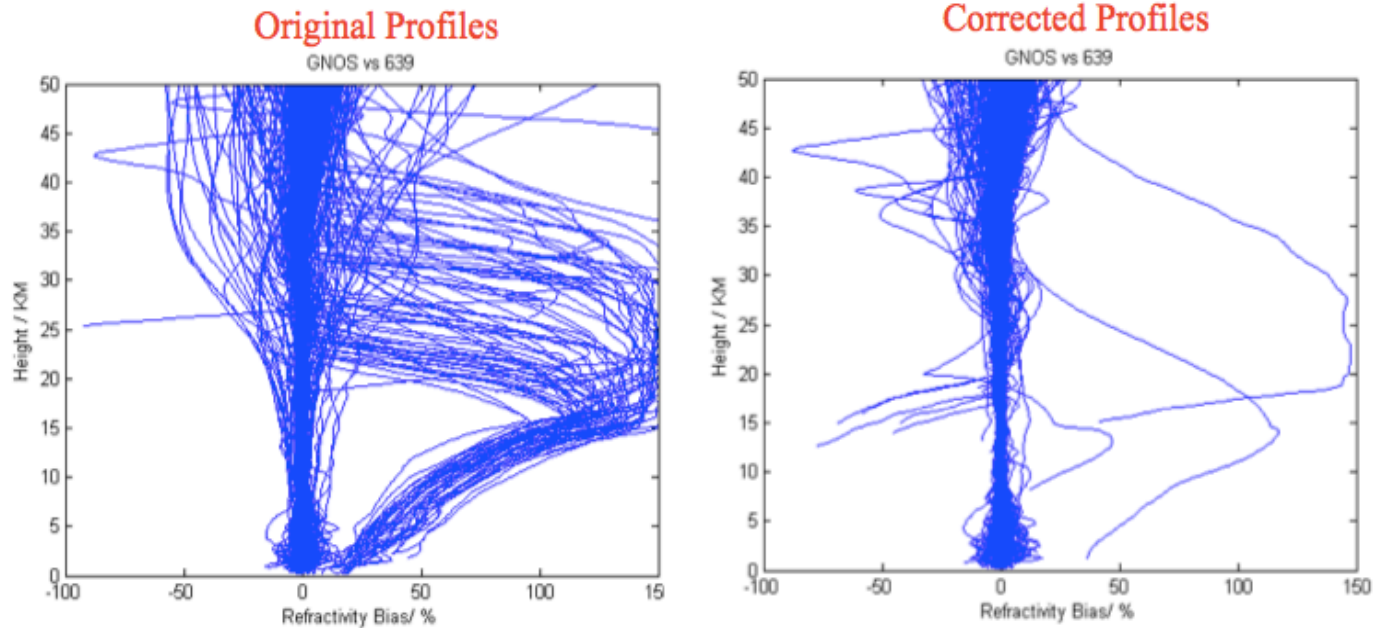

> Both bending angle and refractivity profiles have a extra branch with large bias, no matter compared to reanalysis or radiosonde date.

> The proportion of bad profiles is about 15%.

Liao M., Preliminary investigation with GNOS bending angle data: Monitoring, quality control and possible implications for ROPP, http://www.romsaf.org

Fractional Refractivity of FY3D GPS RO without QC and Correction

FY3D/GPS 201809 original against ERA

GEO Height (m)

(O-B)/B [%] N-unit
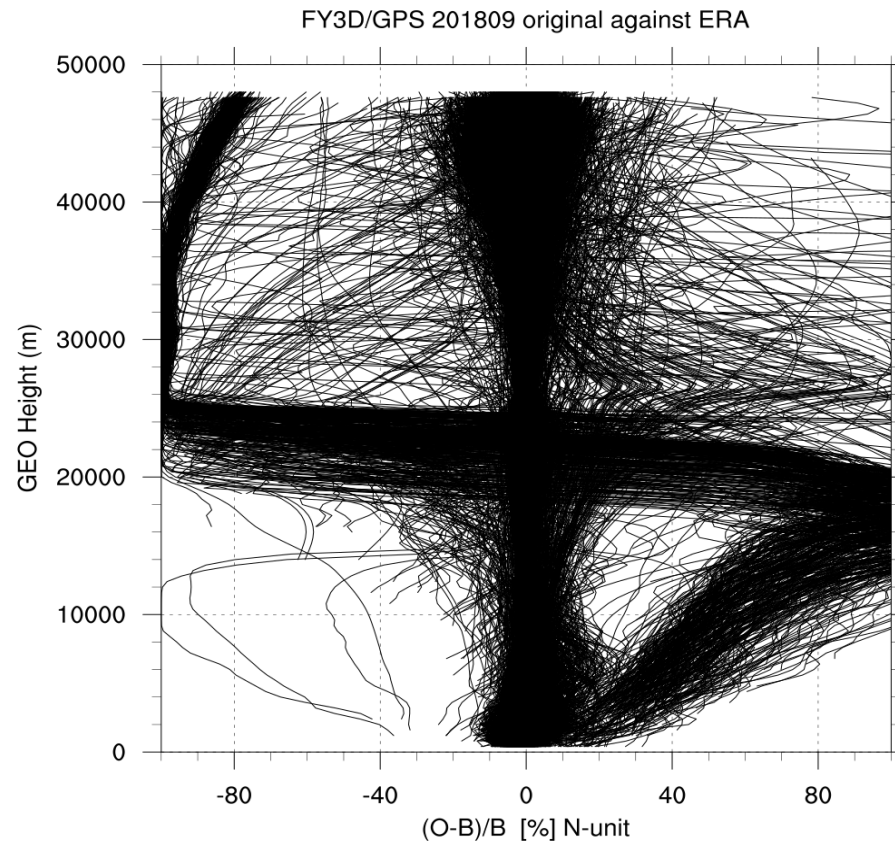

- Similar profiles with large bias near 20Km can be seen. But the ration is less than that of FY3C, about 7%, because the performance of payload has been improved.
- Similar correction algorithm and quality control method will be applied in FY3D GPS RO data, too.
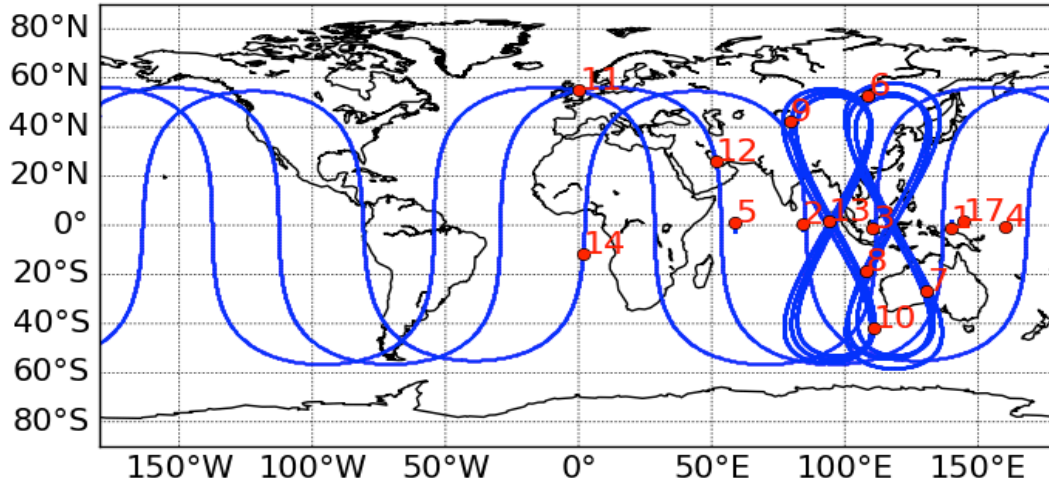

Monitoring of Near Real Time GNOS/GPS Data at ROMSAF
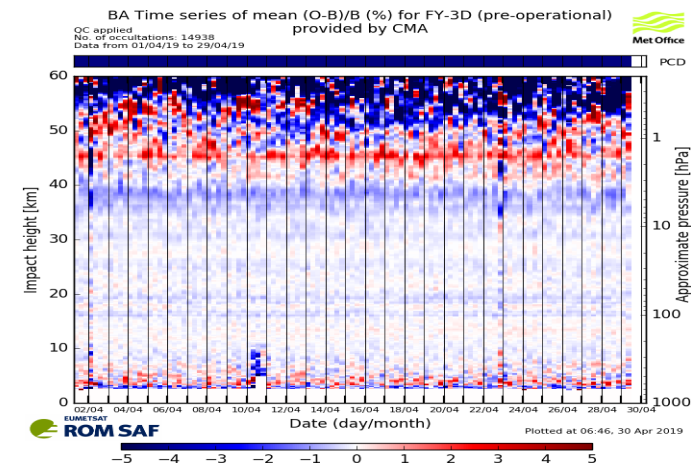

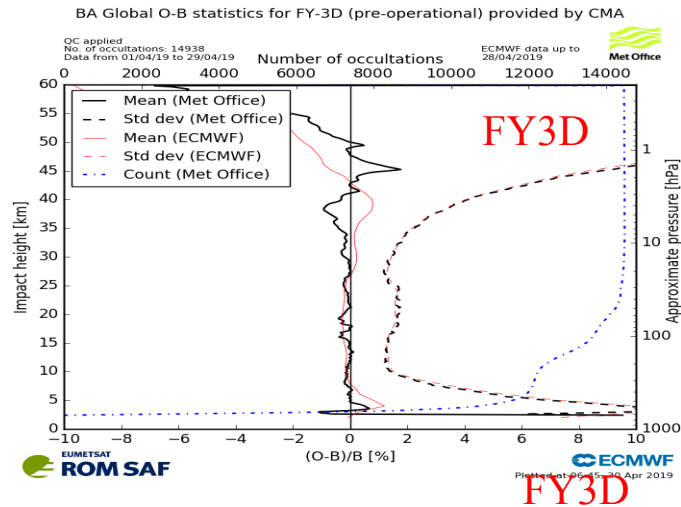

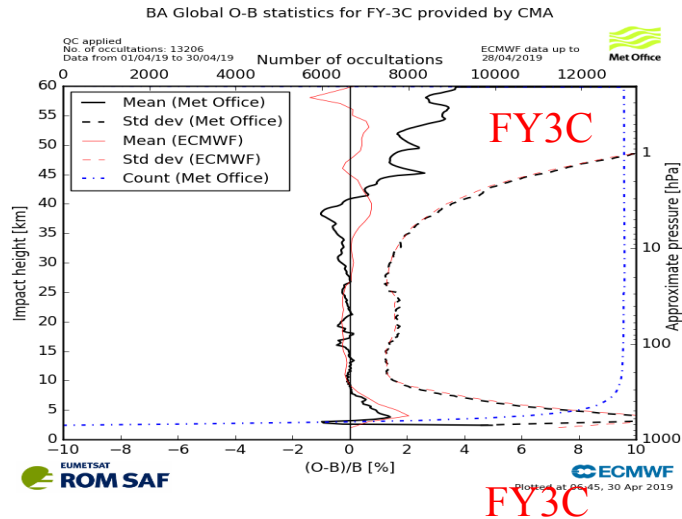

- GNOS/GPS RO data have been disseminated via GTS.
- The quality are similar to other mission RO data.
- Thank ROM SAF for providing the monitoring platform.

BDS Orbits and GNOS/BDS RO Distribution

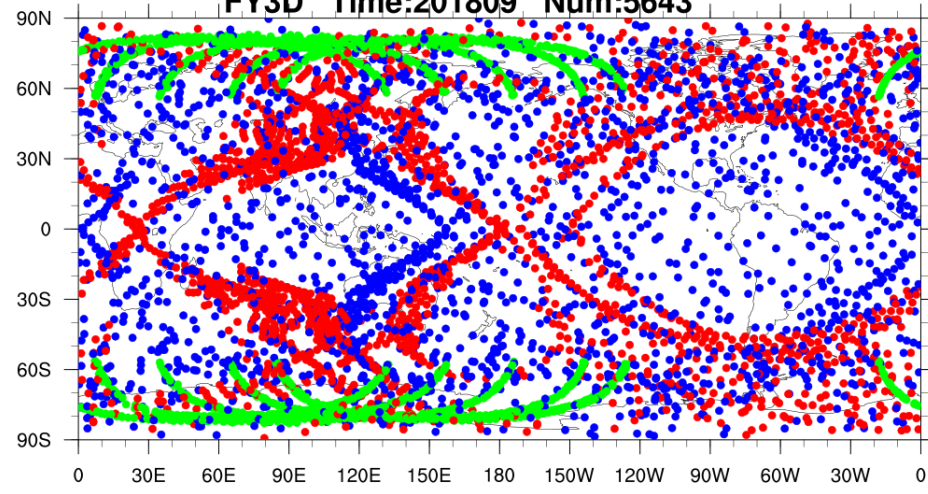

BDS Satellite Track(2018/02/25/00:00 UTC)

- a multi-GNSS receiver.
- **BDS-2 (regional GNSS, 5 GEO + 5 IGSO + 4 MEO)**

green(BD_GEO) blue(BD_MEO) red(BD_IGSO)
FY3C   Time:201809   Num:2200

green(BD_GEO) blue(BD_MEO) red(BD_IGSO)
FY3D   Time:201809   Num:5643

- GEO and IGSO RO have advantages of strengthening the regional weather disaster monitoring .

Fractional refractivity of BDS RO against ERA-Interim analysis
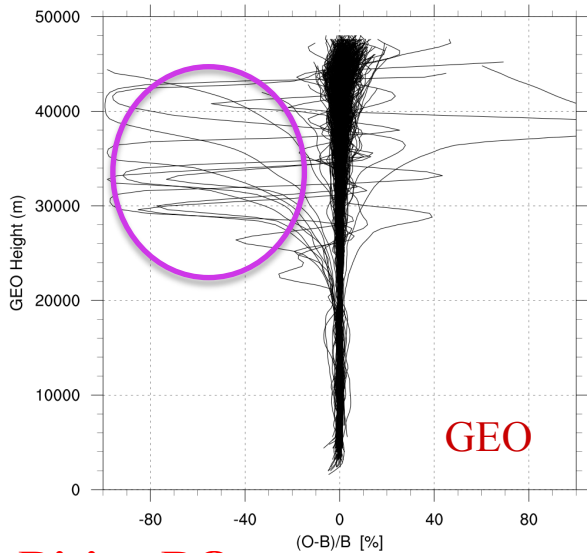

FY-3C BDS RO

FY-3D BDS RO

- ➢ There are no extra branch profiles with large bias like GPS RO.
- ➢ Some profiles still have noise.
- ➢ Open loop for FY3C and closed loop for FY3D.
- ➢ ……

# Open loop tracking problem for FY3D BDS RO

GNSS RO FY3D/BDS open loop

GNSS RO FY3D/BDS closed loop

Fractional refractivity of GNOS RO against FNL analysis

- After the same quality control, the four kinds of GNOS RO data show good agreement during 10–35 Km region with standard deviation of 1%.
- Reconfirming the characteristic of non-bias of RO data.

Issues of GNOS/BDS RO

- BDS RO data quality is similar to GPS RO after QC.

- But further improvements are still needed.

- Open loop tracking has not achieved.

- Data has not been operational due to near real time BDS ephemeris unavailable.

GRAPES (Global/Regional Assimilation Pr*E*diction System) Operational System

Unified framework for global and regional system, including the regional and global deterministic and ensemble system
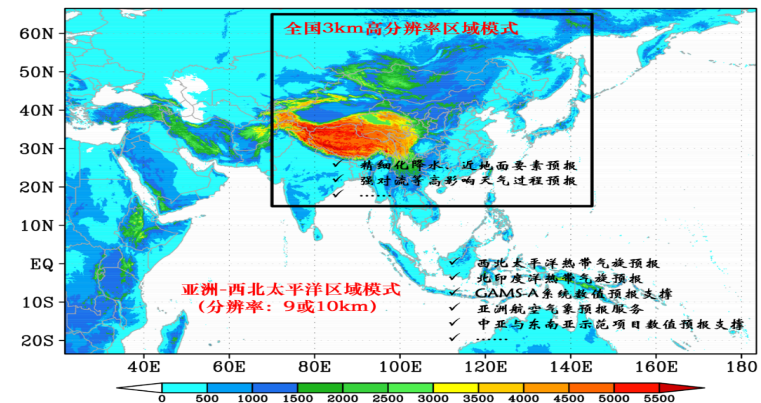

- GRAPES_GFS
  - 25kmL60/36Km, 10d Fcst., 4times/d
  - 4DVar, 100km inner loop
- GRAPES_MESO
  - GRAPES_Meso 10kmL50/3DVar/3h/China
  - GRAPES_Meso 3kmL50/3DVar/3h/East China
  - GRAPES_TYM 12kmL50
- GRAPES_GEPS: 50kmL60, 31Members
- GRAPES_REPS: 10kmL50, 15Members

Upgrade of regional model

Operational upgrades next year

① GRAPES_GFS model top up to 0.1hPa

② 10 and 3Km GRAPES_MESO systems integrated, and became a 3Km China system

③ GRAPES_TYM enlargers domain

全国3km高分辨率区域模式

✓ 精细化降水、近地面要素预报
✓ 强对流等高影响天气过程预报
✓

亚洲-西北太平洋区域模式
（分辨率：9或10km）

✓ 西北太平洋热带气旋预报
✓ 北印度洋热带气旋预报

RO Preprocessing and Assimilation Method

- use both rising and setting RO
- use data from surface to model top
- QC
  - gross checking
  - super refraction checking
  - background checking
- vertical thinning: 1 datum per analysis vertical layer

- assimilate refractivity for GRAPES currently
- assimilate bending angles for GRAPES_GFS next year
- obs. error: vary with latitude and height

$$N = 77.6 * \frac{P}{T} + 3.73 * 10^5 * \frac{e}{T^2} \qquad \alpha(a) = -2a \int_{r_0}^{\infty} \frac{\frac{d \ln n}{dr}}{\sqrt{n^2 r^2 - a^2}} \, dr$$

Trial Configurations

- **GRAPES-Var**
  - ➤ Observations assimilated : conventional data (radiosondes, synops, ships, AMV and aircraft), GNSS RO, MODIS wind, ASCAT wind, radiances (NOAA15,16,17,18,19,METOP and FY)
  - ➤ Regional DA system can only assimilate conventional data
 - ➤ Time windows : 6hr

- **Trial Setup**
  - ➤ configuration of operational system
  - ➤ impact experiments (ctrl+gnos/gps, ctrl+gnos/gps+gnos/bd)
  - ➤ cycling time: 1st - 30th, November, 2013 for global
  - ➤ cycling time: 9 May- 10 June 2018 for region

- **Assimilation of GNOS data**
  - ➤ GRAPES-Var has the ability of assimilating RO data.
  - ➤ GRAPES model top is lower (GPAPES_GFS 36Km, GRAPES_MESO 30Km)
  - ➤ GNOS quality is good in core region.

# Trial Results of Assimilating FY3C/GNOS RO Data in GRAPES_GFS

FY3C RO data has an neutral and positive impacts on global GRAPES forecast skill.

# Trial Results of Assimilating FY3C/GNOS RO Data in GRAPES_MESO

Data volume and distribution
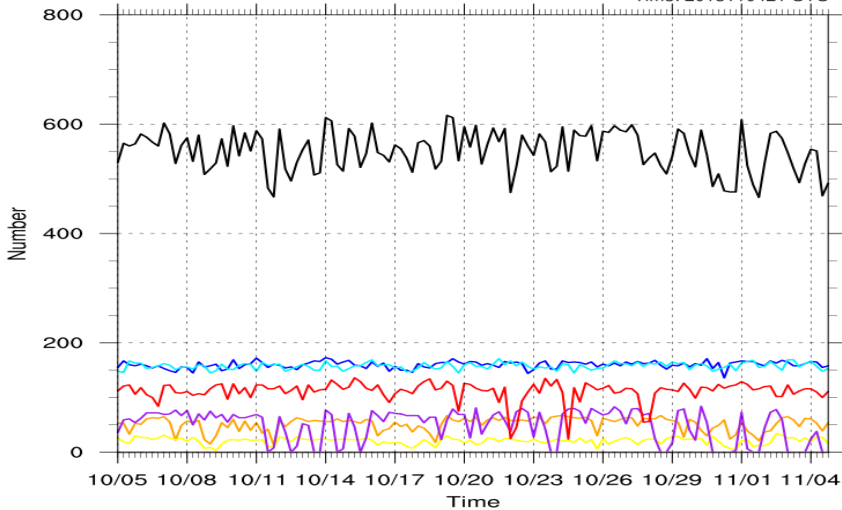

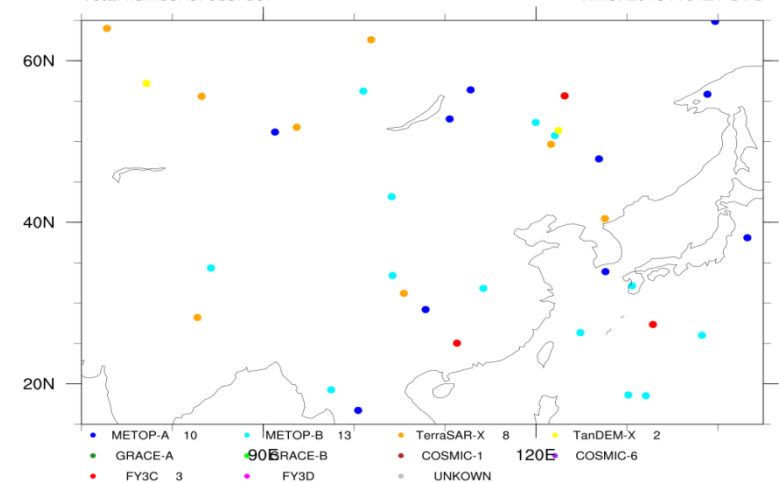

Summary and plan

- GNOS RO data show better quality during 10–35 Km core region.

- FY-3 GPS RO data have been operational at GRAPES.

- Push the operation of BDS RO.

- More elaborated observation impact experiments of GNOS shall be done. For example, how the combined impact of morning and afternoon orbit RO data? Because FY3C is morning satellite, FY3D is afternoon satellite and FY3E is a early morning satellite. How the BDS RO assimilation impact the Tibet plateau, north-western pacific and northern India ocean typhoon, and the polar weather prediction.
